Professional Summary

Data Analyst with hands-on experience through two analytics internships and end-to-end projects using Python, SQL, Advanced Excel, Power BI, Statistics, and Machine Learning. Skilled in data cleaning, exploratory data analysis, KPI reporting, dashboard development, predictive modeling, and time-series forecasting. Combines analytical capabilities with industrial process-monitoring experience to derive actionable insights from operational and business data.

Technical Skills

- **Programming & Databases:** Python, SQL, Pandas, NumPy, SQL Server, Data Extraction, Data Transformation
- **BI & Visualization:** Power BI, DAX, Power Query, Data Modeling, Advanced Excel, Pivot Tables, Streamlit, Plotly, Matplotlib, Seaborn
- **Data Analytics:** Data Cleaning, EDA, Feature Engineering, KPI Analysis, Statistical Analysis, Hypothesis Testing, Correlation Analysis, Customer Segmentation
- **Machine Learning & Forecasting:** Scikit-learn, TensorFlow/Keras, Random Forest, Gradient Boosting, Logistic Regression, Isolation Forest, ARIMA, SARIMA, Model Evaluation, Cross-Validation

Work Experience

DCS Engineer Jun 2025 – Present

Orissa Steel and Power Private Ltd.

- Monitored process parameters for a 180 TPH CFBC boiler through distributed control system operations.
- Analyzed operational and performance data to track boiler efficiency trends and identify process anomalies.
- Prepared structured operational reports summarizing process performance for review and data-informed decision-making.
- Tracked boiler efficiency indicators over time to identify deviations in operational performance for review.
- Flagged process anomalies using observed operating parameters and performance trends from the DCS system.

Data Analyst Intern Mar 2026 – Sep 2026

Unified Mentor Pvt. Ltd.

- Delivered four analytics projects across retention, forecasting, predictive maintenance, and churn segmentation.
- Built interactive Streamlit dashboards with dynamic insights and live deployments.
- Cleaned 10,000–100,000 records and engineered analytical features using Python, Pandas, and NumPy.
- Validated Gradient Boosting, Random Forest, and Isolation Forest using time splits, cross-validation, and backtests.
- Prepared research papers and executive summaries translating findings into actionable stakeholder recommendations.

Data Analyst Intern Nov 2025 – Feb 2026

InlignX Global Pvt. Ltd.

- Prepared datasets with Pandas and NumPy, addressing missing values, duplicate records, and data inconsistencies.
- Built interactive Power BI dashboards to monitor key performance indicators and operational performance metrics.
- Wrote SQL queries using filtering, joins, and aggregations to retrieve and analyze database records.
- Applied statistical analysis with Statsmodels to examine trends, correlations, and patterns across business datasets.
- Combined dashboard reporting and statistical findings to support structured analysis of performance metrics and trends.

Projects

HHS UAC Program – Care Load Forecasting Dashboard GitHub | Live Demo

Python, Streamlit, Scikit-learn, Statsmodels, Plotly

- Built a five-module dashboard forecasting care demand from 1,061 days of data, with alerts and scenario simulations.
- Benchmarked seven models and selected Random Forest (RMSE 6.6) using a chronological holdout.
- Applied rolling-origin cross-validation, walk-forward backtesting, and prediction intervals to assess forecast uncertainty.
- Identified a 71% decline in average daily care load and documented capacity-planning recommendations.

Manufacturing IoT Predictive Maintenance and Anomaly Detection GitHub | Live Demo

Python, Scikit-learn, TensorFlow/Keras, Streamlit

- Analyzed 100,000+ IoT sensor records across 50 machines to detect anomalies and support predictive maintenance.
- Implemented Isolation Forest and Autoencoder models to identify abnormal equipment behavior.
- Created a severity-based Anomaly Index to rank machines by maintenance risk.
- Resolved duplicate records from many-to-many joins and delivered an interactive monitoring dashboard.

Executive Sales Performance and Operations Dashboard

Power BI, DAX

- Built a four-page Power BI dashboard analyzing $2.73M in sales across 3+ years with 15+ interactive visuals.
- Developed DAX measures to analyze revenue, profit margins, and product category performance.
- Identified a 55% profit margin and a 42% Consumer segment share of total revenue.
- Created budget-versus-actual variance reports to track spending across seven cost centers.

Banking Customer Churn and Segmentation Analytics GitHub | Live Demo

Python, Scikit-learn, Streamlit, Plotly

- Analyzed European banking data to identify churn drivers, high-risk segments, and retention opportunities.
- Trained a Gradient Boosting classifier achieving approximately 0.86 ROC-AUC for churn prediction.
- Combined customer segmentation with predictive scoring to support churn-risk analysis.
- Presented model insights and targeted retention recommendations through an interactive Streamlit dashboard.

Education

Jadavpur University 2000
Bachelor of Engineering (B.E.) in Electrical Engineering

Certifications

- Advanced Certification in Data Analytics – IRA Skills
- Global Certificate in Environmental Data & GIS
- Certified Energy Manager and Energy Auditor (CEM, CEA)
